

# Hello there!

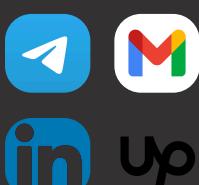

I'm Yohannes Worku, a third-year software engineering student with a passion for AI and web development. I thrive on learning cutting-edge technologies and frameworks, like React and Python, to build innovative, user-focused solutions. Currently, I am diving deeper into data structures and algorithms to sharpen my problem-solving skills, while working on projects like a QR-code-based food ordering system. My ultimate goal is to combine my expertise in AI and web development to create smart, impactful applications that make a difference. Feel free to explore my portfolio and reach out—I would love to connect and collaborate!

## About Me

Hello!, I am a third-year software engineering student with a deep interest in AI and web development. My journey into tech has been fueled by a passion for creating innovative solutions that blend functionality, efficiency, and user experience. Over the years, I have been building my expertise in modern web technologies, like React, and honing my Python skills, which are invaluable in AI development. I am also dedicated to mastering data structures and algorithms to enhance my problem-solving abilities. Whether it is designing intuitive web interfaces or developing intelligent systems, I am committed to continuous learning and growth. In addition to coding, I enjoy working on real-world projects that bring ideas to life. One of my recent ventures is a QR-code-based food ordering system, which merges convenience with technology. Looking forward, I aspire to create AI-powered applications that solve real world challenges and have a positive impact on people's lives. When I am not immersed in code, you can find me exploring the latest tech trends, collaborating with like-minded individuals, or simply enjoying a good book or a walk outdoors. Since I want to improve my data structure and algorithm knowledge I applied to be part A2SV and I am waiting for their response. Thanks for stopping by my portfolio! Feel free to explore my work and get in touch—I would love to connect and discuss exciting opportunities or ideas.
